Difference Between First and Second Order Reactions

The key difference between first and second order reactions is that the rate of first order reactions depends on the first power of the reactant concentration in the rate equation whereas the rate of second order reactions depends on the second power of the concentration term in the rate equation.

Mathematical methods for economic theory 9 2 Second order

As for a first-order difference equation, we can find a solution of a second-order difference equation by successive calculation. The only difference is that for a second-order equation we need the values of x for two values of t , rather than one, to get the process started.

Differential Equations Second Order DE's

In this chapter we will move on to second order differential equations. Just as we did in the last chapter we will look at some special cases of second order differential equations that we can solve. Unlike the previous chapter however, we are going to have to be even more restrictive as to the kinds of differential equations that we'll look at. This will be required in order for us to actually be able to solve them.

Second Order Linear Differential Equations

Second Order Linear Differential Equations 12.1. Homogeneous Equations A differential equation is a relation involving variables x, y, y', y'' . A solution is a function $f(x)$ such that the substitution $y = f(x), y' = f'(x), y'' = f''(x)$ gives an identity. The differential equation is said to be linear if it is linear in the variables y, y', y'' . We have already seen (in section 6.4) how to solve first order linear
